

Allow the **Chicken Reaper** to save you the backbreaking work that comes with poultry production. The Chicken Reaper has proven to be an invaluable assistant in dead bird removal, supplemental feeding, and even house maintenance. Always by your side, ready to carry the load.

Contact us to learn more about the benefits of adding the Chicken Reaper to your poultry operation.

### CHICKEN REAPER HIGHLIGHTS

- Wooden Track
- Adjustable Speed Remote
- Dump Box or Bucket Tray
- 24 Volt Lithium Battery
- Gearmotor Disengage Lever
- Heavy-Duty Galvanized Steel
- Adjustable Height

The **Chicken Reaper** ships with everything needed for the complete system (with the exception of the rail lumber.) All fasteners, bolts, nuts, etc are included!

# Chicken Reaper Specifications

## WOOD TRACK

The truss brackets are secured to bottom of every truss with (2) GRK fasteners. A galvanized steel hanger bracket then attaches the 2 x 6 yellow pine (provided by the end user) rail to truss bracket. This simple and sturdy rail system drastically reduces the cost of installing a trolley system in your poultry house. And since the rail lumber is sourced locally, shipping the Chicken Reaper is very economical. For wider houses a metal rolled tube corner enables you to install a circular track.

## TWO TRAY OPTIONS

### BUCKET TRAY

A simple, flat, stable bucket tray that accommodates (10) 5 gallon buckets. A great option for tray dispersal, maintenance work, dead bird removal, and much more.

### DUMP BOX

This easy to use system utilizes a dump box with a heavy duty handle. Simply fill the tray, move to a suitable location, and dump. Ideal option for the removal of larger birds, turkeys, and supplemental feeding.

### BATTERY

The on-board 24 volt lithium battery and charger provide thousands of charge/- discharge cycles. A single charge lasts 4-5 days on average, depending on length of track.

### REMOTE

A robust, waterproof remote transmitter gives the operator full control of the trolley. Forward, reverse, stop and speed adjustment can all be controlled with the remote allowing you to keep your Chicken Reaper where you need it at all times.

### DRIVE SYSTEM

A 24 volt gear driven motor provides plenty of power to transport up to 500 lbs. The gear box is equipped with a disengage lever, allowing the unit to easily be pushed in the event of a dead battery. The wheels are constructed of tough, easy rolling polyurethane.

### BRIDGE KIT

Dropping brood curtains takes seconds with this no tools required design. Simply remove the bridge and flip the stop tube in place on top of the rail.
